Administration: These are baseline questions and will be administered one time to all participants and followed up with since your last visit question every visit going forward. **Both sets are listed below. Only complete the baseline for participants who have not been administered this section in the past. Otherwise, skip to the last visit questions.**

Introduction:
We are now going to ask you about heart problems that may have been diagnosed prior to age 55 among the men and prior to age 65 among the women in your immediate family. Immediate family comprises your biological father, mother, brothers and sisters.

☐ **Mark here for those participants who do not know them because they are adopted.**

Interviewer note: *Questions apply to all living and deceased immediate family members. If a participant's family member was diagnosed with a heart attack and later died of a heart attack before age 55 if male or age 65 if female, fill in yes for both questions for this same family member. Similarly, if diagnosed with a heart attack and had surgery, fill in yes for both questions. All events have to occur prior to age 55 for men and age 65 for women. If the participant is not sure, mark DK. If he is able to contact you after the interview with a definite answer, update the CADI with this new information*
