Introduction:

We are now going to ask you about heart problems that may have been diagnosed prior to age 55 among the men and prior to age 65 among the women in your immediate family. Immediate family comprises your biological father, mother, brothers and sisters.

Mark here for those participants who do not know them because they are adopted.

Interviewer note: Questions apply to all living and deceased immediate family members. If a participant's family member was diagnosed with a heart attack and later died of a heart attack before age 55 if male or age 65 if female, fill in yes for both questions for this same family member. Similarly, if diagnosed with a heart attack and had surgery, fill in yes for both questions. All events have to occur prior to age 55 for men and age 65 for women. If the participant is not sure, mark DK. If he is able to contact you after the interview with a definite answer, update the CADI with this new information

HIV-POSITIVE 1

HIV-NEGATIVE 2 (GO TO **Q20B**)

The next few questions are related to health care you may receive for your HIV infection. I will be asking you about your regular medical appointments for HIV clinical care. By regular HIV care, I mean a visit to a clinic or doctor's office to have a check-up on how you're doing with your HIV. This does not include sick visits, emergency services, or hospital admissions for HIV/AIDS; it does not include visits that are only for lab or blood work or X-rays, and it does not include your MACS study visits. During a regular HIV medical care visit, you would have met with a doctor, physician's assistant, or a nurse practitioner. We will be asking about your regular HIV care over the past six months. Six months would have started at around ___ / ___ / ___.

***Q18.** In the last six months, how many times did you go for regular HIV care? If you have not gone for regular HIV care, answer zero times.
